

- Billing**
- Number of requests
 - Function Duration

- Bestpractices**
- Seperate business logic from Handler Method
 - Make function modular
 - Ensure function is stateless
 - Store dependencies locally.
 - Limit re-initialization of variables.
 - Reuse existing connections
 - Use tmp space as transient cache
 - Include Logging
 - Use return coding
 - Use enviornment variables
 - Store secretes in secrete manger or Parameter store
 - Avoid Recursive
 - Use Lambda Power Tuning
